

AGUSTIN CAMUS

Denver, CO (relocating January 2027)

agustin.camus2@gmail.com | linkedin.com/in/agustin-camus | github.com/C-Agus | c-agus.github.io

SUMMARY

Senior in FSU's Department of Computer Science (Dec 2026) seeking entry-level software engineering roles from January 2027. Builds secure, tested Python, Java, C++, and JavaScript applications, including a trading strategy backtester.

EDUCATION

Florida State University

Tallahassee, FL

B.A. in Computer Programming and Applications, Minor in Mathematics

Expected Dec 2026

- **Relevant Coursework:** Data Structures & Algorithms, Software Engineering, Full-Stack Development (C#/.NET), Advanced Java Programming, Object-Oriented Programming, Computer Organization, Data Mining, Web Programming

PROJECTS

Grand Exchange Strategy Backtester | JavaScript, HTML/CSS, OSRS Wiki API Senior Capstone | Aug 2026 – Present

- Building, in a 5-person team, a web-based backtesting tool that replays user-defined trading strategies against historical price data from Old School RuneScape's player-driven Grand Exchange market.
- Pulling historical price series from the OSRS Wiki Real-time Prices API and simulating trades against them to evaluate how a strategy would have performed.
- Scoped the project from proposal to an accepted spec: a static, backend-free browser app with guest access.

AniList Discord Bot | Python, discord.py, aiohttp, SQLite, GraphQL

Personal Project | 2026

- Refactored a 1-file synchronous bot into a modular async application across 4 layers (commands, services, database, utilities), exposing 6 hybrid slash/prefix commands with interactive embeds.
- Built an async GraphQL client that caps traffic at 25 requests/min (under AniList's 30/min limit) via sliding-window rate limiting, with 3 exponential-backoff retries and a 45-second response cache.
- Encrypted stored usernames at rest with Fernet while enforcing uniqueness through keyed HMAC-SHA256 fingerprints, reconciling encryption with database constraints.
- Made notifications crash-safe with SQLite checkpoints that advance only after confirmed delivery; built automatic migration for legacy records, validated on a copy of the live database, plus an offline test suite covering 7 areas.

Data Structures Implementations | C++11, Linux, g++

Coursework | 2026

- Built 6 C++ projects from scratch, including a doubly linked list, infix-to-postfix converter, binary expression tree, and separate-chaining hash table powering a password server.
- Matched reference executables byte-for-byte on all 6 projects using diff-based regression testing on a Linux server, compiled warning-free with -Wall -Wextra.

EXPERIENCE

URBOWL LLC

Tallahassee, FL

Line Cook (Part-time)

Sep 2023 – Jan 2026

- Prepared orders in a fast-paced kitchen for 2+ years while in school; led the line on busy shifts and trained new hires.

Chick-fil-A

Tallahassee, FL

Front-of-House Team Member (Part-time)

Sep 2022 – May 2023

- Delivered fast, consistent guest service in a high-volume restaurant and helped onboard newly hired team members.

WE Family Offices

Miami, FL

Summer Intern

May 2022 – Jun 2022

- Supported a multi-family office serving high-net-worth families with file management and time-sensitive tasks.

SKILLS

- **Languages:** Python, Java, C++, C#, JavaScript, HTML/CSS, SQL
- **Frameworks & Tools:** .NET MAUI, discord.py, aiohttp, SQLite, GraphQL, REST APIs, Git/GitHub, Linux, Excel, Claude AI
- **Concepts:** OOP, Data Structures & Algorithms, Async Programming, API Integration, Automated Testing
- **Security:** Encryption at rest (Fernet/AES), HMAC-SHA256, API rate limiting
- **Spoken Languages:** English (native), Spanish (native), Japanese (elementary)
